

Table and its properties

HTML table

- web developers can organize information like text, images, links, and other data into rows and columns of cells using HTML tables.
- The `<table>` tag is used to generate HTML tables.
- Table rows are created using the `<tr>` tag, while data cells are created using the `<td>` tag. Regular elements beneath `<td>` are by default left aligned.

properties of tables :

- Table Heading

Name	batch
ABC	Full stack

- Cell padding and spacing

Name	Batch
Rohan	web development
Sohan	Full stack

• colspan and Rowspan

column 1	column 2	column 3
Row1 cell1	Row1 cell2	Row1 cell3
	Row2 cell2	Row2 cell3
Row3 cell1		

• Table Background

Name	Batch
Rohan	web development
Sehan	Full stack

• Table height and width

ii,	Row1 column1	Row1 column2
	Row2 column1	Row2 column2

• Table caption

	Hey! I am caption	
Row1 column1		Row1 column2
Row2 column1		Row2 column2

Table Header, body, footer
Hi!! I am the head of the table

cell1	cell2	cell3	cell4
Hey!! I am the foot of the table			

<html> Table </table>

</head>

<body>

... <!-- Table --- > { comment }

<table border cell padding = "16px" cell spacing
= "5px" border colour = "red">

<tr>

<th> Sr. NO </th>

<th> Sub 1 </th>

<th> Sub 2 </th>

<th> Sub 3 </th>

</tr>

<tr>

<td> 1 </td>

<td> English </td>

<td colspan = "2"> Science </td>

</tr>

<tr>

<td> 2 </td>

<td> English </td>

<td> Science </td>

<td rowspan = "2"> computer </td>

</tr>

</table>

</body>

</html>

work through of form , get & post
